OUR BUSINESS IS GROWING YOUR BUSINESS

Developing sustainable plant growing solutions together

More yield, less waste

As a professional grower in horticulture and forestry, you seek the most innovative plant growing solutions to improve your efficiency and product quality. We at Jiffy have the best solutions to help you create more yield with less waste.

Jiffy is the leading global supplier of propagation systems, hydroponic systems, natural growing containers and substrates for any type of plant propagation and cultivation enterprises big or small. Our solutions have no limits based on plant type. We use renewable resources and bio-based materials such as peat, coconut coir, pulp and other bio-mass. We abide by the highest industry standards in order to both safeguard the environment and supply the highest-quality, in many cases certified, products to our customers.

Tailor-made solutions

Our broad Jiffy portfolio offers you an incredible variety of options to create tailor-made solutions for your business. And we are always willing to listen to you, our clients, to help us all technically improve in order to feed and beautify the world while caring for the environment. With our portfolio of pots, pellets, coir products, substrates and plugs we aim to help your company find the best solution for your growing needs.

Global company, rich history

Jiffy is a truly global company. Our headquarters are in Zwijndrecht, the Netherlands. We also have locations in the US, Canada, Sri Lanka, Japan, Norway, Denmark, Sweden, France, Spain, and Estonia.

Jiffy is perhaps best-known for the "Jiffy Pot". This root protection and propagation product was launched in the early 1950s and gained huge success in the US & European markets. By 1963, the Jiffy Pot company was making 640 million pots annually. The Jiffy Pot was originally developed in Norway and revolutionized the global retail floral industry.

Innovation is in our roots

Another innovative Jiffy product which is equally well-known in the growing industry today, is the Jiffy-7 pellet. This product was launched in the late 1960s and began production in North America in 1982. This pellet is known all over North America as the "703". Today, billions of plants all over the world are started in a Jiffy in many various types of plant propagation industries.

Jiffy also became a world leader in state-of-the-art propagation systems thanks to the 2002 acquisition of the Preforma Plant Plug. Most recently, we also became leaders in the coir (coconut fibre) market, with our own pellet factory based in Mirigama, Sri Lanka. This facility produces not only the new Jiffy-7C pellet, but also top-quality hydroponic media such as Jiffy Growbags and Jiffy Growblocks made from RHP certified coir – as well as ingredients for Jiffy's wide range of peat-reduced and peat-free substrate mixes. These substrates are produced in our production locations in Estonia, The Netherlands and Canada.

We control the entire production process which always guarantees top quality uniform substrates.

Let's work together

We at Jiffy aim to serve you, our customers in plant propagation and cultivation, to achieve better results. We can do this together by continually improving, innovating and working towards our common goals based on facts, teamwork and involvement. Let's develop sustainable plant growing solutions together: starting today!

JIFFY PREFORMA

Propagation plug solution for every grower

If you are looking for a tailor-made solution of highest-quality substrates, bound together and well-suited to both hard-to-root cutting material and the easy propagating crops or demanding mechanized handling: then the Jiffy Preforma plant plug system is the answer. Professional growers worldwide benefit from the flexibility of the Preforma system. You control which trays are supplied, choose from a selection of substrates, and Preforma is ready to go, right off the delivery pallet. Preforma has a proven track record for a wide variety of seeds, cuttings and tissue culture in the propagation of ornamental, vegetable, perennial and bedding plant crops.

- Ready-to-go
- Fast rooting
- No transplant shock
- Automation

Preforma plugs consistently retain an air content of 30% or more, which means no compaction, even under heavy misting conditions. This makes it an ideal propagation medium, providing an optimal environment for uniform and fast rooting.

The binder's structure ensures no transplant shock. This means you can ship or transplant the plugs earlier, freeing up valuable bench space in order to rotate the crops faster.

Jiffy Preforma plugs are available for many different crops. But over the years we developed some crop specialties such as: orchids, soft fruits, perennial from cuttings or TC and pot plants.

OUR BUSINESS IS GROWING YOUR BUSINESS

Orchid Plugs

Orchid growers dealing with sensitive Phalaenopsis plants know that this genus requires very special treatment. Jiffy Orchid Plugs are specifically designed for growing orchids and can be perfectly combined with the Orchid Plug tray. The Orchid Plug is well-aired, even right after irrigation, to avoid excess moisture. Not too wet, and not too dry is the secret to consistent orchid production. The top of the plug will remain dry, thanks to its open structure, in order to prevent liverwort or other stifling algae. This high-quality substrate system developed over years of experience, is ideal for growers seeking reliable, consistent, quality plants with superior rooting. The plugs are easy to open, making inserting young plants easy. The substrate itself is specifically developed to have the correct pH and EC for orchids.

Box Plugs

Professional growers who need a superior substrate plug which can be put straight into trays on location, choose the Preforma Box Plug. This is the best high-quality plug for those looking for a smart economical solution. The Jiffy Box Plug was developed specially for export and can be delivered anywhere in the world. Jiffy Box Plugs are available in different sizes: 20/40 with a sticking hole; 30/50 with a slit and 30/50 with a sticking hole.
