3.0 Gallon Pot (14 inch)	2	3 liners	2 liners		5 liners
3.0 Gallon Pot (14 inch)	3	2 liners	2 liners	1 liner	5 liners

#### Tech Tips:

- Combo recipes are created for variety compatibility of cultural requirements and vigor.
- Use a high lime potting medium with low alkalinity irrigation water. Keep substrate pH at 6.0–6.4 for zonal geraniums and 5.8–6.2 for interspecific geraniums.
- Feed early and consistently with 200 – 250 ppm N using a 14-4-14, 15-5-15 or 17-5-17 fertilizer.
- Start growing warm – day 70–74 °F (21–23 °C) and night 64–70 °F (18–21 °C) for the first four to six weeks, then lower to an average daily temperature of 63 °F (17 °C) for the final weeks of production.

#### 1.5 - 3.0 Gallon Pots:

- Spray Florel® late in propagation at 350 ppm and again 10 days after transplant to improve branching.
- Growth can be controlled using sprays of Altercel® (1,000 ppm) or under hot conditions with a tank mix of B-Nine®/ Altercel® (2,500/1,000 ppm).
- Hang baskets early in production, or space containers five weeks before finishing; timely spacing is critical.
- Before shipping, spray Chrysal Alesco® to protect from ethylene and extend retail shelf life.
